KALAIMANI R

BACKEND / API DEVELOPER | TECHNICAL LEAD

rkalai1502@gmail.com | 9894007611 | Perambalur, Tamil Nadu, India
Portfolio: kalaimani1502.github.io/kalai_portfolio

PROFESSIONAL SUMMARY

Backend / API Developer with **5.5+ years** of experience designing and building scalable APIs and web applications with **PHP (Laravel) and Python (FastAPI)**. 3+ years supporting a large-scale Australia-based real estate platform, plus current work building Python APIs for transport and event-management applications. Comfortable owning backend architecture end-to-end — REST APIs, WebSockets, AWS infrastructure, client communication, and **technically guiding frontend and backend developers** through integration and delivery.

TECHNICAL SKILLS

Languages & Frameworks: PHP (Laravel, Lumen, Slim), Python (FastAPI)

APIs & Real-time: REST APIs, WebSockets, Swagger/OpenAPI, Postman

Databases: MySQL, PostgreSQL

Cloud & DevOps: AWS (EC2, S3, RDS), Jenkins, Git/Bitbucket, Linux

Frontend (guidance level): React.js, React Native, HTML/CSS

AI-Assisted Development: Claude, ChatGPT, DeepSeek, Qodo

PROFESSIONAL EXPERIENCE

API / Backend Developer | *Australia-Based Real Estate Platform • 3+ Years*

- Designed and maintained scalable **REST APIs** (PHP/Laravel) powering complex real-estate workflows — bidding, legal processes, document management, and internal communication.
- Built a **custom e-signature solution** in-house (no third-party service), owning backend logic and API design while guiding the React.js frontend build.
- Implemented **WebSocket-based real-time communication** for live updates and coordinated frontend/backend integration end-to-end.
- Managed **AWS EC2, S3, and RDS** infrastructure — application hosting, file storage, database, and server-side configuration/troubleshooting.
- Worked directly with international clients to gather requirements and translate business needs into technical solutions.
- Technically guided frontend and backend developers on API design, integration, and debugging; led code reviews and production troubleshooting.

Backend / API Developer | *Transport Management & Event Management Apps • Current, 4 Months*

- Developing **Python-based REST APIs** and backend business logic for transport and event-management workflows.
- Supporting real-time features with **WebSockets** and coordinating API contracts with React / React Native frontend developers.
- Using AI-assisted development tools (Claude, ChatGPT) in a structured development and validation workflow.

PREVIOUS PROJECT EXPERIENCE

- **Food Delivery Application** — APIs, business logic, database operations, integrations, and application debugging.
- **Villa / Beach House Booking Platform** — booking-related APIs, database workflows, integrations, and backend functionality.
- **Animal Healthcare System** — developed and maintained APIs, business logic, database operations, and integrations.
- **Labour & Delivery Management Application** — APIs and backend workflows with database integration and troubleshooting.

EDUCATION

B.E., Computer Science & Engineering — University College of Engineering, BIT Campus, Trichy | 2016–2020

Higher Secondary (HSC) — Dhanalakshmi Srinivasan Higher Secondary School | 2014–2016
